	Examiner Erma Cameron	Art Unit 1762	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- a) Claim 1, line 7: it is not clear if B is in “dissolved form” in liquid A or another liquid.
- b) Claim 7: it is not clear what is meant by aqueous liquids. What would be an aqueous liquid except water?
- c) Claim 10: obtainable is vague in that it is unclear if the surface has been obtained or not.

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1-10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Page 4, line 18 states that the B is immiscible or soluble to less than 0.1 g/l, but claim 1 states that both of these are true about B.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 1206976.

'976 teaches waterproofing surfaces by creating microstructures of 10 nm-10 microns height and 20nm-10 microns spacing, by application of hydrophobizing agents such as siloxane or perfluorohydrocarbons, either liquid or dissolved ([19] and [20] of translation). The surface conditions and agents used overlap with that claimed by applicant, and therefore the process as a

Art Unit: 1762

whole inherently meets the static contact angle, kinematic viscoisty and surface tension relationships claimed by applicant. The agent is applied at 0.01-50 wt % ([24]).

'976 fails to teach the g/m2 amount of the application, but it would have been obvious to one of ordinary skill in the art to have optimized the application amount through no more than routine experimentation.

Specification

7. The specification needs a "Brief Description of the Drawings".

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
